

Senior Project Manager, Water Resources

DHI is a global leader in solving the toughest water, climate, and biodiversity related challenges. We seek a confident, outgoing, organized, and self-motivated professional to help drive our environmental projects forward. The role location is based at DHI HQ located in Hørsholm, Denmark.

Purpose of role

The role will be a senior project manager with the purpose of supporting the global water resources team with expertise related to project management, technical expertise and knowledge, client engagement and proposal involvement. The role involves being a key member of the team located in Denmark and having at least 10 years of experience with international or national projects related to water resources as well as project management and client engagement.

Specific objectives for this position

- **Project manager or Team Leader** on our international projects all related to water resources management or operational forecasting of flood or drought.
- **Technical input on our international projects** as being a water resources or modelling expert will be integrated into the role and the specific focus will depend on your experience, and knowledge but we will expect that you can take an active and leading role as a technical expert.
- **Mentoring and advising our other technical experts** is a responsibility in the role and the specific content will depend on your experience and background.
- **Client engagement and sales** will be a key part of the position, and the role will either have specific client account responsibilities or being a supporting role for some of our existing client accounts (the focus will depend on your regional and client experience).
- **Proposal management or proposal involvement** will be an integrated part of the role where you will be part of our proposal team and actively be involved in proposal work.
- **Work closely with DHIs global business units** both with the water resources global business unit but also across the different technical domains at DHI.
